Problem Set #2

1. Solution Process

Struggled somewhat with the heuristics. Knowing that we have to sort by end time, it took some experimentation to figure out that you needed to minimise the gap between two classrooms.

Then it was too slow so i had to use the lowerbound function.

2. Challenges and Reflections

A n^2 solution was too slow and therefore i had to tap into possible speedups and found the lowerbound function.

Reflection: always watch / read lectures as it is useful.

3. Collaboration

No collaboration.
